SUMMARY

Computer Science undergraduate passionate about AI, full-stack development, and intelligent software systems. Experienced in building web applications and intelligent systems, with strong skills in technical scoping, multi-disciplinary team coordination, and structured project delivery. Eager to contribute to impactful software engineering and AI projects while continuously learning and exploring emerging technologies.

EDUCATION

Bachelor of Engineering (B.E) in Computer Science and Engineering (2024-2028) at **LJ University |** Gujarat, Ahmedabad

SKILLS

Languages: Python, Java, JavaScript, SQL, HTML/CSS
AI /ML : Python, Exploratory Data Analysis, Edge AI Integration
Web & Backend: React.js, Node.js, Express.js, REST APIs, Tailwind CSS, Bootstrap, JDBC
Databases: MySQL, PostgreSQL, MongoDB, Firebase
Tools & Embedded Systems: Git, GitHub, VS Code, ESP32, Microcontrollers, Sensors
Testing & QA: API Testing (REST APIs, Postman), Test Case Design, Cross-Browser Testing, DOM Debugging, Data Integrity Validation.

PROJECTS

1. **Safe Route** | *React, Leaflet.js, Django REST API, Python, Machine Learning, Pandas*

- Built an interactive React frontend with Leaflet.js to display road safety predictions and risk heatmaps on a dynamic map interface.
- Wrote Python scripts to generate synthetic location data, which helped train the models and test how well the system handles maps.
- Integrated the frontend with a Django REST API backend, optimizing Pandas data pipelines for smooth map rendering and low-latency risk updates.
- Presented a Research Poster on this project Safe Route at the International Conference on Recent Advances in Engineering and Technology (ICRAET-2026) at LJ University

2. **Gestura (Wearable Gesture Controller) |** *ESP32, Microcontrollers, IoT, Deep Learning.*

- Executed hardware assembly, ESP32 microcontroller configuration, and sensor input integration.
- Integrated edge AI inference outputs with smart home relays to enable touch-free appliance control.
- Coordinated a multi-disciplinary engineering team through the full product lifecycle—from hardware component scoping and assembly to exhibition at Innovation Village 2026.

3. **Memory Map** | *Node.js, Leaflet.js, Firebase, MySQL, Tailwind CSS*

- Built a responsive, location-aware web application enabling users to pin, organize, and explore personal memories on an interactive map
- Implemented custom location-indexing logic to automatically detect nearest cities/states and track visited regions.

4. **Healthcare Management System** | *Java, JDBC, MySQL*

- Designed and executed test logic for Role-Based Access Control (RBAC), validating access boundaries for patient, doctor, and admin roles.
- Normalized database schemas to prevent data anomalies and ensure integrity across concurrent workflows.

CERTIFICATIONS

1. **Full Stack Web Development (Delta)**– Apna College
2. **Exploratory Data Analysis for Machine Learning** – IBM
3. **Introduction to Java** – LearnQuest
4. **Inheritance and Data Structures using Java** – Penn Engineering
5. **Introduction to HTML, CSS, and JavaScript** – IBM
